Series TPF transducers with flush measurement diaphragm are designed to check the pressure of high-viscosity fluids, which cannot be done with normal transducers with internal measurement chamber.

They are used in the food industry and in plastics processing, up to a temperature of 120°C, and in other applications in which the means of measurement must not stagnate in cavities.

The selection of highly stable electronic components and ultrasonic checking of materials guarantee the absence of inclusions and defects on the primary reaction mechanics, assuring a highly reliable product.
