

# LIPS<sup>®</sup> M112 GAUGE HEAD POSITION SENSOR

## INTRINSICALLY SAFE FOR HAZARDOUS MINING ENVIRONMENTS

- Intrinsically safe for Mining to:  
Ex I/II M1/1GD
- Gauge head positioning for industrial and scientific applications
- Non-contacting inductive technology to eliminate wear
- Travel set to customer's requirement
- Compact 19 mm diameter body
- Sealing to IP67

As a leading designer and manufacturer of linear, rotary, tilt and intrinsically safe position sensors, Positek<sup>®</sup> has the expertise to supply a sensor to suit a wide variety of applications.

Our M112 LIPS<sup>®</sup> (Linear Induction Position Sensor) incorporates electronics system EX04 which is ATEX approved for use in potentially explosive gas/vapour, dust atmospheres and mining environments. The M112 is designed for gauge head positioning in industrial and scientific applications and is ideal for OEMs seeking good sensor performance for arduous applications in hazardous areas. The M112, like all Positek<sup>®</sup> sensors, provides a linear output proportional to displacement. Each sensor is supplied with the output calibrated to the travel required by the customer, from 10mm to 50mm and with full EMC protection built in.

Overall performance, repeatability and stability are outstanding over a wide temperature range. The sensor is very robust, the body and plunger being made of stainless steel for long service life and environmental resistance.

The plunger is spring loaded with a domed end. The M112 is easy to install with a long 1/2 inch UNF mounting thread and is supplied with two lock nuts for positioning. Environmental sealing is to IP67.

### SPECIFICATION

#### DIMENSIONS

Body diameter	19 mm
Body Length (excluding thread)	
(Axial cable version)	160.7 mm
(Axial connector version)	160.7 mm
(Radial connector version)	169.5 mm
Mounting Thread Length	59 mm
<i>For full mechanical details see drawing M112-11</i>	
Spring Force	1.5 - 4.5 N approx.
Power Supply	+5V dc nom. ± 0.5V, 10mA typ 20mA max
Output Signal	0.5-4.5V dc ratiometric, Load: 5kΩ min.
Independent linearity	< ± 0.25% @ 20°C
Temperature coefficients	< ± 0.01%/°C Gain & < ± 0.01%FS/°C Offset
Frequency response	> 10 kHz (-3dB)
Resolution	Infinite
Noise	< 0.02% FSO
Intrinsic Safety	Ex I/II M1/1GD EEx ia I/IIc T4 (Ta = -40°C to +80°C) Ex iaD 20 T135°C (Ta = -40°C to +80°C)
Sensor Input parameters (connector option/s)	Ui: 11.4V, Ii: 0.20A, Pi: 0.51W.
(cable option/s)	Ci: 1.16µF, Li: 50µH Ci: 1.36µF, Li: 710µH with 1km max. cable
Environmental Temperature Limits	
Operating	-40 to +80°C
Storage	-40 to +125°C
Sealing	IP67
EMC Performance	EN 61000-6-2, EN 61000-6-3
Vibration	IEC 68-2-6: 10g
Shock	IEC 68-2-29: 40 g
MTBF	350,000 hrs 40°C Gf
Drawing List	
M112-11	Sensor Outline

*Drawings, in AutoCAD<sup>®</sup> dwg or dxf format, available on request.*

Do you need a position sensor made to order to suit a particular installation requirement or specification? We'll be happy to modify any of our designs to suit your needs - please contact us with your requirements.

# LIPS<sup>®</sup> M112 GAUGE HEAD POSITION SENSOR

## INTRINSICALLY SAFE FOR HAZARDOUS MINING ENVIRONMENTS

Intrinsically safe equipment is defined as "equipment which is incapable of releasing sufficient electrical or thermal energy under normal or abnormal conditions to cause ignition of a specific hazardous atmosphere mixture in its most easily ignited concentration."

ATEX approved to; Ex I/II M1/1GD  
 EEx ia IIC T4 (Ta = -40°C to +80°C)  
 Ex iaD 20 T135°C (Ta = -40°C to +80°C)

Designates the sensor as belonging to; Groups I and II: suitable for all areas (including mining), Category M1/1 GD: can be used in areas with continuous, long or frequent periods of exposure to hazardous gas (Zones 2 to 0) and dust (Zone 20), equipment remains energised.

Gas:  
 Protection class ia, denotes intrinsically safe for all zones  
 Apparatus group IIC: suitable for IIA, IIB and IIC explosive gases.

Temperature class T4: maximum surface temperature under fault conditions 135°C.

Dust:  
 T135°C: maximum surface temperature under fault conditions 135°C.

Ambient temperature range extended to -40°C to +80°C.

It is imperative Positek<sup>®</sup> intrinsically safe sensors be used in conjunction with a galvanic barrier to meet the requirements of the product certification. The Positek X005 Galvanic Isolation Amplifier is purpose made for Positek IS sensors making it the perfect choice. Refer to the X005 datasheet for product specification and output configuration options.

### Safety Parameters:-

Ui: 11.4V, Ii: 0.20A, Pi: 0.51W  
 Ci = 1.36µF\* Li = 710µH\* (cable option/s)  
 Ci = 1.16µF Li = 50µH (connector option/s)

\*Figures for 1km cable where: Ci = 200pF/m & Li = 660nH/m

Sensors can be installed with a maximum of 1000m of cable.

Cable characteristics must not exceed:-

Capacitance: ≤ 200 pF/m for max. total of: 200 nF.

Inductance: ≤ 660 nH/m for max. total of: 660 µH

For cable lengths exceeding 10 metres a five wire connection is recommended to eliminate errors introduced by cable resistance and associated temperature coefficients.

ATEX approved sensors suitable for gas (X series) and dust (E series) applications, are also available from Positek.

### TABLE OF OPTIONS

**MEASUREMENT RANGE:** Factory-set to any length from 10 to 50 mm in increments of 1mm.

#### ELECTRICAL INTERFACE OPTIONS

The Positek<sup>®</sup> X005 Galvanic Isolation Amplifier is available with 0.5-9.5V or 4-20mA transmission output options.

#### CONNECTOR/CABLE OPTIONS

Connector - Binder 713 series IP67  
 Cable with PG9 gland IP67

Cable length >50cm – please specify length in cm up to 15000cm maximum.

We recommend all customers refer to the 3 or 5-Wire Mode Connection page.

# Three or Five-Wire Mode Connection

## FOR INTRINSICALLY SAFE SENSORS IN HAZARDOUS ATMOSPHERES

The following discussion about three and five wire mode connections, between the X005 Galvanic Isolation Amplifier and sensor, is intended as an aid for end-users who are not familiar with the topic.

Whether opting for a pre-wired Positek® Intrinsically Safe sensor or one with a connector, choosing the right mode of connection and cable to suit the application requires careful consideration.

Conductor resistance, a function of conductor cross-section, cable length and temperature, causes volts drop across a cable. As the term implies cables do not transmit the voltage perfectly, depending on material resistivity, conductor cross section and the current drawn from the power supply the voltage at the end of the cable will be less than at the power supply. This can significantly alter the perceived accuracy of the sensor which is ratiometric i.e. the output signal is directly affected by the supply voltage at the sensor.

It should be noted that volts drop calculations consider the current flow return path so the cable length is multiplied by two.

Three wire mode connections are common and are suitable in most cases with short or moderate cable runs. Applications that do not require a high degree of accuracy but have cable runs, say in excess of 50m, volts drop can be reduced by introducing a terminal box close to the sensor and using a larger cross-section cable with for a majority of the intended cable run. Another factor to consider is conductor temperature. Fluctuations in temperature cause minor changes in resistance, the effects of which will be seen as gain variation in the sensor output.

Sensors supplied with cable are calibrated with the cable fitted which negates errors due to conductor resistance at room temperature; however, small gain errors due to temperature fluctuations in the cable should be expected.

There are instances where large cross-section cables are not practical; for example most standard industrial connectors of the type used for sensors have a maximum conductor capacity of 0.75mm<sup>2</sup>, copper prices and ease of installation are other considerations.

Five wire mode connections have significant benefits over three wire mode as losses in the power and ground conductors are compensated for, thus smaller cables can be used. The Galvanic Isolation Amplifier senses and dynamically adjusts the output voltage so that the voltage at the sensor is correct, the effects of cable resistance and associated temperature coefficients are eliminated. The X005 amplifier can compensate for up to 15Ω per conductor with a current flow of 15mA, which is more than adequate for 150m of 0.25mm<sup>2</sup> cable.

For this reason Positek recommends five wire connections for cable lengths exceeding 10 metres in 0.25 mm<sup>2</sup> cable to preserve the full accuracy of the sensor.

See illustrations right for examples of connecting a sensor to the Galvanic Isolation Amplifier.

The X005 will compensate for up to 15 ohms resistance in each conductor, this imposes the following minimum cable sizes:-

Cross Section (mm <sup>2</sup> )	Cable Length (metres)
0.25	Up to 150
0.5	150 to 300
0.75	300 to 450
1.0	450 to 600
1.5	600 to 900
2.0	900 to 1000

It should be noted that the maximum cable length as specified in the sensors certification takes precedence and must not be exceeded.

The above lengths and conductor sizes used in a three wire connection will introduce a gain reduction of 5% and a ±1% temperature dependence of gain over the range -40°C to +80°C for the cable temperature. (i.e. about -150 ppm/°C for the maximum lengths shown and less pro rata for shorter lengths.)
